ABOUT US

CEOTHERM Industrial Furnace Systems is a technology-driven engineering company specializing in the design, engineering, manufacturing, installation, and commissioning of high-performance industrial furnaces, heat treatment systems, and auxiliary process equipment for ferrous and non-ferrous metal industries.
Our core areas of expertise include:

- Aluminum melting, casting, and recycling plants
- Aluminum billet casting houses and homogenization facilities
- Aluminum extrusion and metal forming industries
- Ferrous and non-ferrous metal processing plants
- Heat treatment and annealing systems
- Industrial automation and process control systems
- Furnace modernization, capacity enhancement, and energy efficiency improvement projects

At CEOTHERM, every project is engineered according to the specific production objectives, process requirements, and investment expectations of our customers. All engineering, manufacturing, and commissioning activities are carried out by our experienced team using advanced technologies and internationally recognized quality standards.
Our systems are designed with a strong focus on energy efficiency, operational reliability, process optimization, and sustainable manufacturing. By utilizing advanced combustion technologies, regenerative burner systems, and state-of-the-art automation solutions, we help our customers achieve lower fuel consumption, reduced carbon emissions, and higher production performance.
From project development and detailed engineering to turnkey commissioning, CEOTHERM is committed to delivering innovative, reliable, and long-lasting industrial solutions. This approach has established CEOTHERM as a trusted partner for aluminum, steel, and metal processing industries in both domestic and international markets.
